

## Square Bag

The International Dunnage square airbag was designed and created to serve as the primary function of bracing products with a void space greater than twelve inches wide, which cannot be filled with a standard dunnage bags. They are also reusable like rest of International Dunnage bags.

- **Square Bags can be used on rail once but not twice.**

The International Dunnage square bags brace loads without the need for additional dunnage material. Made with moisture resistant material and an extremely durable outer shell, the International Dunnage square bags are also AAR certified. They are not made for heavy duty purposes.

International Dunnage has a factory dedicated to the manufacture of Square Bags, and can produce custom made sizes on request.

- \* Brace loads without the need for additional dunnage material.
- \* Can fill much larger voids.
- \* Recommended for voids over 50cm.
- \* Reusable – as are all International Dunnage bags.
- \* Moisture resistant, with an extremely durable outer shell.
- \* For Light Duty purposes.
- \* 100% AAR certified.
